Julio Olvera

Senior Software Engineer — Backend & Full Stack

CONTACT

linkedin.com/in/julio-olvera-ortiz

CORE SKILLS

Node.js · TypeScript · JavaScript · REST APIs · AWS · Microservices · SQL / NoSQL · CI/CD · System Design · Team Leadership · Fintech Systems · Data Integration

EDUCATION

Autonomous University of Mexico State
B.Eng., Computer Engineering

HIGHLIGHTS

5+ years professional backend & full-stack engineering experience

Led teams of 4+ engineers on production platforms

Delivered systems for Fortune 500 clients across fintech, healthcare, real estate & energy

PROFILE

Senior Software Engineer with 5+ years of experience specializing in backend and full-stack development using Node.js, JavaScript, and TypeScript. Proven track record across Backend Developer, Full Stack Developer, and Team Lead roles, with strong problem-solving skills and a history of guiding projects from concept to successful delivery. Focused on leveraging modern backend technologies to build scalable, secure solutions that meet business needs and elevate user experience.

EXPERIENCE

EPAM SYSTEMS, INC.

3rd Line / Software Maintenance Engineer — BKHG-TYCH — Jan 2025 – Present

Client: Baker Hughes USA · Project Leucipa (Tycho)

- Support Baker Hughes' flagship AI-powered production optimization platform, built on AWS to unify production data, tools, and workflows into a single operational plane.
- Maintain, improve, and expand existing application modules while developing new features against established requirements.
- Identify and resolve production issues and errors to minimize unplanned downtime and improve operational efficiency.

Senior Backend Engineer — Oct 2024 – Present

Client: EPAM Systems, Inc. · THOR Pricing Tracking & Management System

- Build scalable, secure, high-performance APIs powering real-time, market-responsive pricing across the platform's core architecture.
- Manage and secure sophisticated database systems, enforcing detailed pricing rules and predictive analytics for strategic decision-making.
- Identify and resolve performance bottlenecks; oversee rigorous testing and CI/CD processes to maintain stability and reliability.

Software Development Lead — May 2023 – Jun 2024

Brillio

Client: Realtor.com

- Led development and maintenance of 15+ code repositories and sub-modules for Realtor.com's critical infrastructure.
- Orchestrated a customer onboarding console platform, increasing client onboarding efficiency by 300%.
- Conducted in-depth schematic data analysis for 10,000+ daily incoming inquiries.
- Managed a team of 4 developers building efficient onboarding processes for new client CRMs.

Sr. Software Engineer — Dec 2022 – May 2023

Unosquare

Client: Foundation Medicine Inc.

- Enhanced and maintained 5+ critical repositories supporting cancer research and medical reporting.
- Designed 10+ cancer reporting templates with automated export features, improving performance by 20%.
- Built a secure API layer integrating data from multiple clinical trial databases, ensuring consistency and accessibility.
- Applied advanced algorithms for real-time data analysis and pattern detection, supporting early diagnosis initiatives.

Sr. Backend Engineer, Full Stack Developer — Mar 2022 – Oct 2022

Anheuser-Busch InBev

- Integrated 20+ bank institutions across South America and South Africa into a Global Payment Gateway for fintech transactions.
- Developed and deployed backend services for 5+ countries, ensuring compliance with local and international regulations.
- Designed a mobile portal for custom invoice payments and embedded analytics hooks for enhanced data capture.
- Engineered server-side logic and database solutions balancing performance, scalability, and security.

Backend Engineer — Feb 2021 – Mar 2022

Derevo

Client: WiseITDMS

- Designed and executed an ERP and Content Management System for a leading automotive retailer.
- Transformed standalone software into a modern web-based application.
- Overhauled database architecture per Codd's normalization principles to improve scalability.

Full Stack Web Developer — Jul 2020 – Jan 2021

Reina Madre

- Designed database structures and backend processes for medical data management with clinical stakeholders.
- Built interfaces supporting 100+ daily patient interactions for colposcopy and pathology workflows.
- Founded the Maria Linda software system to improve operational efficiency in cosmetic clinic settings.
